

Manage faxes through your PC with **SwyxFax**

Think of the amount of money you spend on fax machines, paper and toner cartridges. Then consider the time it takes to install and manage fax systems - especially when they jam or keep failing to send. Also take into account the fact you physically need to be at the fax machine to send and retrieve documents. All this time adds up, costing your business real money.

Wouldn't it be so much easier if you could send faxes electronically without a fax machine and manage faxes through your Outlook application? You could receive faxes just like email messages, wherever you are and, if you need to, you can still print a fax anytime you want to.

Key benefits of **SwyxFax**

- Save time and money by sending and receiving faxes without a physical fax machine
- Ensure you get all your messages in one unified inbox- no matter what format they are in (fax, email, voicemail).
- Optimise your current infrastructure by integrating fax to your other communications (e.g. voice, email)
- Centralise all your communications and contacts by linking with Microsoft® Outlook® so you can create a personal phonebook and send faxes using information from your contacts list.
- Reduce your office overheads as there is no requirement for an analogue line, a fax machine, etc.
- Fax-based marketing campaigns can be easily set up and sent to contacts in the business's CRM system

Key benefits of **SwyxFax**

SwyxFax, part of the SwyxWare suite of option packs, is a software component installed on a server (usually the same server on which SwyxServer is installed). Incoming documents are received by SwyxFax and converted into an image file (e.g. JPEG, TIFF) and delivered to the recipient's inbox.

The software integrates with any application that has printing options, meaning there is no extra software to purchase. It also works together with Microsoft® Outlook® so you can send faxes using information from your contacts list.

Features of SwyxFax

Fax handling (incoming)

- Automatic distribution of incoming fax messages to the SwyxFax users by DDI and MSN
- Automatic printing of incoming faxes to any local or network printer
- Central fax access for messages without a specified recipient
